☐ GETTING STARTED

shinyapps.io

Help (http://shiny.rstudio.com/help/)

Hi! You must be new here...

Thanks for trying out shinyapps.io! You'll need to install the shinyapps R package to get started. The shinyapps package enables you to deploy and manage your Shiny applications directly from your R console. To get started, fire up your favorite (http://www.rstudio.com/products/rstudio/) IDE, and follow the directions below.

STEP 1 - INSTALL DEVTOOLS

The shinyapps packages requires the devtools package from CRAN. To install devtools run the following code in your R console:

install.packages('devtools')

STEP 2 - INSTALL SHINYAPPS

With devtools installed you can install the shinyapps package directly from the GitHub. Run following code in your R console:

devtools::install_github('rstudio/shinyapps')

STEP 3 - AUTHORIZE ACCOUNT

The shinyapps package must be authorized to your account using a token and secret. To do this, click the copy button below and we'll copy the whole command you need to your clipboard. Just paste it into your console to authorize your account. Once you've entered the command successfully in R, that computer is now authorized to deploy applications to your shinyapps.io account.

Hide secret

Copy to clipboard

In the future, you can manage your tokens from the Tokens page the settings menu.

STEP 4 - DEPLOY

Once the shinyapps package has been configured, you're ready to deploy your first application. If you haven't written any applications yet, you can also checkout the Getting Started Guide (http://shiny.rstudio.com/articles/shinyapps.html) for instructions on how to deploy our demo application. Run the following code in your R console.

library(shinyapps)
shinyapps::deployApp('path/to/your/app')
